

UKL Strainers help collect and subsequently remove pipeline debris such as scale, rust, jointing compound and weld metal in pipelines, thus protecting expensive and critical equipment and processes. Damage to the plant is frequently caused by such pipeline contaminants which may find their way into the pipeline system.

Y-Type Strainers are the most economical choice for large debris removal. They are most common type of strainers used in pressurized fluid lines, and also find wide usage in suction or vacuum conditions.

UNI Klinger make Y-type strainers comply with the requirement of the European Pressure Equipment Directive 97/23/EC and carry CE mark when so required. Products fall within the PED categories I to III.

Features:-

- UKL Strainers can be used in liquid as well as gas lines.
- UKL Strainers is suitable for Hazardous Environment.
- Maintenance free and long life.
